

THE CHEESE PROJECT

Thermal Imaging Surveys

Design company name: The CHEESE Project CIC
Project location: Bristol, Bath, Northeast Somerset, South Glos
Project completion date: Ongoing

Project brief

The CHEESE Project (Cold Homes Energy Efficiency Survey Experts) is an award-winning not-for profit service specialising in low-cost or free, enhanced, guided thermal imaging surveys using custom cameras and a blower door, to help households and contractors pinpoint the causes of heat loss and draughts, as well as signposting solutions.

With more than 10 years' experience and nearly a hundred 5* reviews, a CHEESE survey makes for an integral part of any retrofit or energy efficiency DIY project, where their process, and knowledgeable surveyors, empower and motivate householders to take informed action using the powerful visual data provided. The project's thermal imaging protocol, kit and software has been developed in-house and is designed to keep costs low and image quality high.

Sustainability features

- Helped over 1,200 households to identify energy inefficiencies and improvement options
